

CM System 7.1.0 Release Notes

New Features

Contextual Help Text for Fields

This feature allows developers to define contextual Help Text for all fields within a Content Type, thereby enabling users to identify exactly what data should be entered for each field.

Refer to *CM System 7.1.0 Release Notes Guide (Section 1)* for detailed implementation information.

Grouping of Fields

This feature allows developers to define groups of fields in Content Types that can be displayed within Content Editors. These groups can be expanded and collapsed by contributors during content update.

Refer to *CM System 7.1.0 Release Notes Guide (Section 2)* for detailed implementation information.

HTML5 within Ephox EditLive!

This feature allows content contributor to add browser supported HTML5 tags within rich-text (Ephox EditLive!) fields.

Refer to *CM System 7.1.0 Release Notes Guide (Section 3)* for detailed implementation information.

Bug Fixes

Section 508 Compliance

The following areas within the Content Explorer are now Section 508 compliant:

- Calendar dates within Advanced Search dialog box
- Create New Folder dialog box fields
- User login credentials (User, Role, Community)
- Ephox EditLive! toolbar options
- Content Editor fields in both Edit and View mode
- Labels are explicitly associated with their controls

Refer to *CM System 7.1.0 Release Notes Guide (Sections 4, 5, and Appendix A)* for detailed implementation information.

The following areas within the Content Explorer are now compliant with color contrast rules:

- Content Explorer interface in high-contrast OS settings
- Content Editor Error messages
- Content Explorer Logout button

Refer to *CM System 7.1.0 Release Notes Guide (Section 6)* for detailed implementation information.

JBoss Security

- Addressed information disclosure vulnerability within the servlet
- Addressed security vulnerability configuration

Community Mapping during Cloning of a Site

Cloning a site correctly maps content items to their target communities.

Email Notifications

- Email attributes for LDAP users are correctly retrieved for email notifications
- Ad-hoc Notifications are correctly sent to selected users

Refer to *CM System 7.1.0 Release Notes Guide (Section 7)* for detailed implementation information.

Ephox EditLive! Editor

The following updates have been made to the Ephox editor:

- Asian/Non-Roman characters can be correctly linked to anchor links within the item
- Control icons no longer wrap to 3 rows to save valuable real-estate

Force Checkin via Action Panel

Action Panel allows contributors to successfully Force Checkin an item.

Item History in the Audit Trail

Audit Trail maintains accurate workflow state history when transitioning items from Draft to Public state.

Server Administrator

Administrator can now login to the Server Administrator Console from within the Workflow tab of the Content Explorer.

Revision Comparison

List of available templates within the Revision Comparison feature is sorted alphabetically.

Translation for Inline Links

Multiple inline links pointing to the same item will process correctly during translation.

Unpublishing

Items purged from the Quick Edit state will successfully Unpublish during Publishing Editions.

Roles Popup Box

User Roles popup window within Content Explorer no longer closes automatically and requires a user to manually close the window.

Velocity

Velocity engine does not throw exceptions when navigational elements are more than 20 levels deep.

Refer to *CM System 7.1.0 Release Notes Guide (Section 8)* for detailed implementation information.

Orphaned Content Items

This fix enables content contributors to remove items from folders and delete Navons without leaving orphaned content items.

Refer to *CM System 7.1.0 Release Notes Guide (Section 9)* for detailed implementation information.
