

# CM System 7.2.0 Release Notes

---

## New Features

### Taxonomy

This feature allows developers to create Taxonomies and associate them to fields in Content Types, thereby enabling users to use these to tag content in the content explorer.

Refer to *CM System 7.2.0 Release Notes Guide (Section 1)* for detailed implementation information.

### Link Automation

This feature allows users to automatically convert non-managed, hyperlinks to managed links in Ephox Edit-Live fields in the Content Editor.

Refer to *CM System 7.2.0 Release Notes Guide (Section 2)* for detailed implementation information.

### Revision Removal

This feature allows admin users to purge specified revisions of all content items in the CMS.

Refer to *CM System 7.2.0 Release Notes Guide (Section 3)* for detailed implementation information.

### Grouping of Content Types

This feature allows developers to define groups of Content Types to be displayed as submenus within the action menu in the Content Explorer.

Refer to *CM System 7.2.0 Release Notes Guide (Section 4)* for detailed implementation information.

### Grouping of Templates

This feature allows developers to define groups of Templates to be displayed as submenus within the Preview menu in the Content Explorer.

Refer to *CM System 7.2.0 Release Notes Guide (Section 5)* for detailed implementation information.

## **Vertical Tab for Field Grouping**

This feature allows developers to set a property to render grouped fields in vertical tabs in the Content Editor when creating or editing content.

Refer to *CM System 7.2.0 Release Notes Guide (Section 6)* for detailed implementation information.

## **Formatting in Helptext**

This feature allows developers to add formatted text with various html tags, static images and links to helptext associated to fields.

Refer to *CM System 7.2.0 Release Notes Guide (Section 7)* for detailed implementation information.

## **Bug Fixes**

### **Webdav for Content Types With Hash Fields**

Content Types with hash fields can be imported into the CMS using webdav.

### **Helptext**

The title attribute value of an image in Helptext is rendered as tool tip of the image in IE. In order to fix this, the 'title' attribute for help text image icon should be present and set to blank.

### **Checkbox Group**

The checkbox group renders correctly in browsers.

### **NavSubmenu Slot**

To change the out of box behavior of the NavSubmenu slot and make it editable, a new property allowNavonSlotEdit has been introduced. To make the NavSubmenu slot editable, edit the edit the server.properties file in [CMS-root]/rxconfig/Sever

Set allowNavonSlotEdit = true
